Spencer Fisher

Software Engineering Student (UTS) | Backend Systems & API Development (Node.js, PostgreSQL)

0431 189 783 | spencerflorackfisher@gmail.com | LinkedIn | GitHub

Career Objective

Final-year UTS Software Engineering student focused on backend development and scalable system design, with experience building full-stack applications and data-driven systems. Seeking real-world opportunities to contribute to backend systems, API development, and practical software projects while continuing to develop production-level engineering skills.

Education

Bachelor of Engineering (Honors), Software Engineering (UTS) **Graduating 2026**

High School Certificate (THE KING'S SCHOOL) **Graduated 2021**

Technical Skills

Languages: Python, Java, C#, C++, SQL
Web Development: HTML, CSS, JavaScript
Frameworks & Databases: MongoDB, SQLite, PostgreSQL, Express (Node.js)
Tools: Git/GitHub, Jira, Confluence

Work Experience

Computer Science Intern – AI & Automation **Aug 2026 – Present**
RENO SPARES

- Contribute to AI and automation initiatives by translating evolving business requirements into technical solutions using AI-assisted development workflows
- Support technical implementation and problem-solving across changing project requirements, including exposure to CI/CD and automated deployment workflows

IT Support and Administration **Dec 2021 – Present**
DALUCH GLOBAL RECRUITMENT PTY LTD

- Maintained reliable IT workflows through data backup, documentation, and network/software optimisation
- Built and managed WordPress content strategy, increasing traffic by 40% through structured SEO improvements

Relevant Projects

Software Developer (Independent Project) **Apr 2026 – Present**
Football Fan Sentiment Analysis Platform (Atmos FC)

- Designed and built a full-stack web application that analyses post-match football fan sentiment by aggregating YouTube comments into interactive match reaction summaries
- Developed a Python FastAPI backend integrating Football-Data.org and YouTube Data APIs to process fixture data, match events, and fan discussion data across multiple competitions

Software Developer (Independent Project) **Dec 2025 – Present**
Student Productivity Dashboard (Nexa)

- Designed and built a student workload management system to reduce reliance on multiple disconnected productivity tools for academic planning and assignment management
- Developed using Node.js, Express, and PostgreSQL with 5+ REST API endpoints supporting authentication and persistent multi-user data storage
- Tested with 6-8 early users (friends and family), incorporating feedback to improve application workflows, interface usability, and overall user experience
